Setup conda

12.10.2023

- Package management

- Cross-Platform Compatibility

- Clean environments / Separated python environments

Init new environment

conda create --name aai2 python==3.9 -y

Activate environment

conda activate aai2

Install packages you need (e. g. jupyter)

conda install jupyter

Other packages

conda install numpy

pip install numpy

- Let us use our installed packages and our conda environment

Go to the path of your downloaded practicals and type

   jupyter-notebook

to start the notebook from the command line

If you want to exit your conda session, simply type

conda deactivate

After submitting all exercises from AAI 2 you could also delete your environment

without damaging other projects and their specific python package versions

conda remove --name aai2 --all
